

Yao Yu

Algorithm Engineer

Objective

I wish to do some related work on data mining, machine learning

Contact Info

#800, Dongchuan Road, Shanghai

(+86)17091830476

<https://romanyu.github.io>

csyuyao@sjtu.edu.cn

Education

- 2014 – present **Shanghai Jiao Tong University**
master of computer science
(expected graduation: Mar, 2017)
- 2010 –2014 **Central South University**
bachelor of computer science

Awards

- 2015 Second-class Scholarship
2-prize of 2015 hackathon of TouchPal
- 2014 Second-class Scholarship
- 2013 Outstanding Graduate
- 2012 National Encouragement Scholarship
First-class Scholarship(GPA:86/100)
Outstanding Student Leader
- 2011 Second-class Scholarship(GPA:83/100)
Outstanding Student

Experience

- Algorithm Engineer Intern**
At dianping.com
June, 2016 – Present
Focus on recommendation system, my responsibility is to provide better user experience of module “Guess You Like” of App. Our KPI is UV-CTR. ♥ Shanghai
- Data Development Intern**
At TouchPal
March, 2015 – Jan, 2016
Focus on big data processing, my responsibility is to provide operation data of Apps, like the number of new/upgrade users, DAU, retention rate, push messages. ♥ Shanghai
- Teaching Assistant**
At Shanghai Jiao Tong University
Sep, 2015 – Jan, 2016 Python
Sep, 2014 – July, 2015 Database ♥ Shanghai

Projects

- Item-similarity Recommendation (offline data)**
Intro: http://romanyu.github.io/item_similarity_based_on_word2vec/
Recommendation strategy of module “Guess You Like” of App, computing the latent interesting item using item-based CF, firstly generate word embedding using word2vec, then computing similarities between every two vectors. Improve KPI UV-CTR 3%
Technology: Hadoop, Java, word2vec
- User-based Collaborative Filtering (offline data/realtime)**
Intro: http://romanyu.github.io/user_based_collabrative_filtering/
Recommendation strategy of module “Guess You Like” of App, computing offline data using user-based CF, improve KPI UV-CTR 5%; Real-time strategy recommends item based on user similarities and 7-day click behaviors of k nearest neighbours, improve KPI UV-CTR 5%.
Technology: Hadoop, Hive
- Real-time Computing Platform**
Intro: <http://romanyu.github.io/real-time-data-process-platform/>
A real-time framework to calculate the number of new/upgrade users and DAU a.k.a daily active user, and some push messages statistics.
Technology: Spark, Cassandra, Kafka, Scala

Off-line Data Statistics

Computing DAU, retention rate, new/upgrade activations, etc.

Skills

| Java | Python | Data Structure | Algorithm | Database
SQL/NoSQL | Unix/Linux | Shell Scripts

Focus on related work on big data, familiar with Hadoop, Spark, Hbase, Hive, etc. familiar with frequently-used algorithm of data mining and machine learning
